# TESTING TOOLS

Our Testing Tools support financial institutions in conducting comprehensive regression tests of card systems as well as 3-D Secure ecosystem. The platform is available as SaaS in Oracle Cloud Infrastructure, allowing to create an individualized testing instance and to connect existing systems to the testing environment.

## Visiona Test Tool

Visiona Test Tool (VTT) service supports banks in conducting comprehensive regression tests of their card systems.

The goal of VTT is to shorten the regression tests of new application releases as much as possible through the automation and repeatability of test scenarios.

VTT enables definition of scenarios from both the authorization and clearing side. Defined scenarios are run on demand, ensuring repeatability of test cases with each test iteration. It enables faster time-to-market for banking products while saving bank's resources and, at the same time, meeting the requirements of local regulation authorities. Banks now have full freedom to create and manage a catalogue of test scenarios.

VTT is available in the SaaS model via Oracle Cloud Infrastructure.

## Visiona 3DS on Test

Visiona 3DS on Test is a complete, EMVCo certified, 3-D Secure ecosystem, including a fully functional Directory Server. Any 3DS component on Customer's side can be connected to this ecosystem in order to perform any required test scenarios.

For ACS testing we provide the Customer with an application with integrated 3DS SDK to test the App device channel authentication flow.

The platform is available in Oracle Cloud Infrastructure, allowing to create a separate testing instance to each Customer.

## ABOUT VISIONA

VISIONA provides scalable and innovative solutions for digital and omni-commerce payments. We are a trusted IT solutions partner in banking, financial and e-commerce ecosystems. Our team designs, develops and implements projects which meet the requirements of dynamically changing payment systems. Visiona's complete solutions suite covers the entire digital payment value chain as well as ensures international standards of security and compliance.

**19** years on market

**130** experts on board

**30 mln** cards in service

• We are one of few companies in the world with all 3-D Secure process components (ACS Directory Server, 3DS Server and 3DS SDK) certified by EMVCo.

• Our offer includes comprehensive fraud protection and authentication tools to make payment processes seamless and secure.

• We deploy, process and manage our solutions across an on-premise platform or cloud environment.
